

# AH-64

# CRASH RESCUE

**TYPE: TWIN ENGINE**  
**CREW: 2**  
**PASSENGERS - 0**

To gain entrance to the cockpit area, both the pilot's and copilot's/gunner's canopies open on the right side of the aircraft.

## WARNING

In case of fire, the safest approach to the AH-64 helicopter, which may be armed, would be toward its side.

## CAUTION

The AH-64 helicopter is equipped with explosive charges in the canopy for emergency exiting. It could be hazardous for ground crew if they are in the canopy fragment area when the systems are activated using either the internal or external canopy jettison handles.

If the canopy fails to open, use external canopy jettison system or break canopy.
